

Issue a Prescription

1 Dashboard → Menu → Therapies & Prescription

1 Log in at recovery360.cyberliver.com

2 Open Menu → Therapies & Prescription

3 Click the **blue button** → new prescription

4 Enter name, email, CareNotes ID

5 Click "Generate prescription code" → confirm details

6 Code + PIN generated → also emailed to client

7 Download / print prescription sheet

Onboard Client onto App

Do this in-session, before client leaves

1 Client searches "Recovery360" on App Store / Google Play → **free install**

2 Open app → tap "I have a prescription code"

3 Enter **prescription code + PIN** from printed sheet

4 Client sets a **personal password** → completes profile

5 Walk through **daily check-in** screen together
Confirm they can record abstinence & breath check

6 Show **CBT lessons** — available from Day 1

7 Confirm **Day 1 = today** — 90-day programme starts now

Review a Client at Risk

Red flag on dashboard = action required today

1 Log in → find client with **red risk indicator**

2 Click **red button** → open review panel

3 Review **Usage & Behaviour Insights**
Engagement trend, missed check-ins, abstinence data

4 Read **risk explainability panel** — understand what triggered the flag

5 Select + send a **motivational message**
Edit if a personal touch is needed

6 Add **clinical notes** — required to save the review

7 Log **call duration** if phone contact was made

8 Click "Mark as Reviewed" → closes the flag
